# Database

# Challenges and Solutions

- Deprecate Books/Users while we have them in database

```
@GetMapping("/admin/deleteUser")
public String deleteUser (@RequestParam Long userId, RedirectAttributes redirAttrs) {
    User user = userRepository.findById(userId).get();
    List<Rental> rental = rentalRepository.findByUserUsernameAndReturnDateIsNull(user.getUsername());
    if (!rental.isEmpty()) {
        redirAttrs.addFlashAttribute( attributeName: "userNotDeleted", attributeValue: "WARNING: Cannot delete! This user has not returned a rented book!");
    } else {
        user.setDeprecated(true);
        userRepository.save(user);
        redirAttrs.addFlashAttribute( attributeName: "userDeleted", attributeValue: "User successfully deleted");
    }
    return "redirect:/admin/manageUsers";
}
```

```
public Page<User> findAllByDeprecatedFalse(String keyword, Pageable pageable);

public Page<User> findAllByDeprecatedFalse(Pageable pageable);
```

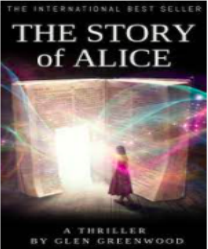

# Challenges and Solutions

## Flash Messages

```
@GetMapping("/admin/deleteBook")
public String deleteBook(@RequestParam Long bookId, RedirectAttributes redirAttrs){
    Book book = bookRepository.findById(bookId).get();
    List<Rental> rental = rentalRepository.findByBook_IdAndAndReturnDateIsNull(bookId);
    if(!rental.isEmpty()){
        redirAttrs.addFlashAttribute(attributeName: "bookNotDeleted", attributeValue: "WARNING: Cannot delete! This book is rented");
    }
    else {
        book.setDeprecated(true);
        bookRepository.save(book);
        redirAttrs.addFlashAttribute(attributeName: "bookDeleted", attributeValue: "Book successfully deleted");
        //bookRepository.deleteById(bookId);
    }
    return "redirect:/admin/manageBooks";
}
```

# Challenges and Solutions

- Spring Security redirect based on Roles
- Solution:

```
@Configuration
public class CustomAuthenticationSuccessHandler implements AuthenticationSuccessHandler {

    @Override
    public void onAuthenticationSuccess(HttpServletRequest httpServletRequest, HttpServletResponse httpServletResponse,
        Authentication authentication) throws IOException, ServletException {

        Set<String> roles = AuthorityUtils.authorityListToSet(authentication.getAuthorities());
        if (roles.contains("ROLE_Admin")) {
            httpServletResponse.sendRedirect(location: "/admin");
        } else {
            httpServletResponse.sendRedirect(location: "/member/dashboard");
        }
    }
}
```

# Challenges and Solutions

- Uploading files
  - @Lob, [] byte
  - MultipartFile

```
@PostMapping("/admin/addBook")
public String addBook(@Valid Book book, BindingResult bindingResult,
    RedirectAttributes redirAttrs,
    @RequestParam("coverPhoto") MultipartFile multipartFile1,
    @RequestParam("ebookFile") MultipartFile multipartFile2)
```

```
byte[] file1 = multipartFile1.getBytes();
byte[] file2 = multipartFile2.getBytes();
```

```
spring.servlet.multipart.enabled=true
```

# Challenges and Solutions

"Failed to convert property value of type  
org.springframework.web.multipart.support.StandardMultipartHttpServletRequest\$StandardMultipartFile to required type byte[]"

- Solution:

```
@InitBinder
protected void initBinder(HttpServletRequest request, ServletRequestDataBinder binder) throws ServletException {

    // Convert multipart object to byte[]
    binder.registerCustomEditor(byte[].class, new ByteArrayMultipartFileEditor());
}
```

# Challenges and Solutions

- Managing file sizes
- Solution:
  - Storing E-book PDFs in a separate table
  - Setting file size limits

```
Long maxImageSize = 1024*1024L;
```

```
if(multipartFile1.getSize() > maxImageSize){  
    FieldError imageSize = new FieldError( objectName: "book", field: "coverPhoto", defaultMessage: "File size must not exceed 1MB.");  
    bindingResult.addError(imageSize);  
}
```

# Challenges and Solutions

```
spring.servlet.multipart.max-file-size=2MB  
spring.servlet.multipart.max-request-size=2MB
```

- @ControllerAdvice

```
@ExceptionHandler(MaxUploadSizeExceededException.class)  
public String handleFileUploadError(RedirectAttributes redirAttrs) {  
    redirAttrs.addFlashAttribute(attributeName: "error", attributeValue: "File cannot exceed 2MB");  
    return "redirect:/admin/manageBooks";  
}
```

---

File cannot exceed 2MB

```
<div class="text-danger">[[${error}]]</div>
```

# What We Learned

- Sending e-mail confirmations when a book is rented
- Gmail SMTP Server with Java Mail Sender

```
<dependency>  
  <groupId>org.springframework.boot</groupId>  
  <artifactId>spring-boot-starter-mail</artifactId>  
</dependency>
```

```
spring.mail.host=smtp.gmail.com  
spring.mail.port=587  
spring.mail.username=bookbarn.fsd01@gmail.com  
spring.mail.password=[REDACTED]  
spring.mail.properties.mail.smtp.auth=true  
spring.mail.properties.mail.smtp.starttls.enable=true

# What We Learned

```
public void sendSimpleEmail(String toEmail, String username, String title, String author, String dueDate) {  
  
    SimpleMailMessage message = new SimpleMailMessage();  
    String body = String.format("Congradulations %s, a book just rented the book: %s by %s! You must return it by: %s ",  
                                username, title, author, dueDate);  
  
    String subject = "Book Rented";  
    message.setFrom("bookbarn.fsd01@gmail.com");  
    message.setTo(toEmail);  
    message.setText(body);  
    message.setSubject(subject);  
    try{  
        mailSender.send(message);  
    }  
    catch(MailException ex) {  
        System.err.println(ex.getMessage());  
    }  
}
```

## Book Rented Inbox x

**bookbarn.fsd01@gmail.com**

to me ▾

Congradulations jim123, you have just rented the book: Book2 by John Bark! You must return it by: 2022-01-17

```
service.sendSimpleEmail( toEmail: "bookbarn.fsd01@gmail.com", principal.getName(), book.getTitle(),  
                          book.getAuthorFullName(), rental.getDueDate().toString());
```

# What we learned

- Retrieving and displaying relevant information in small chunks for the search catalog
- Solution:
  - Query using keyword and availability
  - Pagination using Pageable interface
  - Sorting using Sort class

## Search Catalog

Keyword:

☐ Available

☐ Unavailable

# What we learned

## Keyword queries

```
@Query("SELECT b FROM Book b WHERE b.deprecated = false AND " +  
      "CONCAT(b.title, ' ', b.authorFullName, ' ', b.category, ' ', b.bookType, ' ', b.isbn) " +  
      " LIKE %?1%")  
public Page<Book> findAllByDeprecatedFalse(String keyword, Pageable pageable);
```

```
@Query("SELECT b FROM Book b WHERE b.deprecated = false AND b.isAvailable=true AND " +  
      "CONCAT(b.title, ' ', b.authorFullName, ' ', b.category, ' ', b.bookType, ' ', b.isbn) " +  
      " LIKE %?1%")  
public Page<Book> findAllByDeprecatedFalseAndAvailable(String keyword, Pageable pageable);
```

```
@Query("SELECT b FROM Book b WHERE b.deprecated = false AND b.isAvailable=false AND " +  
      "CONCAT(b.title, ' ', b.authorFullName, ' ', b.category, ' ', b.bookType, ' ', b.isbn) " +  
      " LIKE %?1%")  
public Page<Book> findAllByDeprecatedFalseAndAvailableIsFalse(String keyword, Pageable pageable);
```

- Caveat: only works for 1 keyword, not multiple keywords

Keyword:

keyword cannot contain spaces

# What we learned

## Sorting and Pagination

```
public interface BookRepoPagination extends PagingAndSortingRepository <Book, Long> {
```

```
    public Page<Book> findAllByDeprecatedFalse(Pageable pageable);
```

```
    public Page<Book> listAll(int pageNumber, String keyword, String sortField, String sortDir) {
```

```
        // Create pageable object
        Pageable pageable = PageRequest.of( page: pageNumber - 1, size: 2, sort);
```

```
        return bookRepoPagination.findAllByDeprecatedFalse(pageable);
```

```
Page<Book> page = bookService.listAllAvailable(currentPage, keyword, sortField, sortDir, available);
```

```
Long totalItems = page.getTotalElements();
```

```
int totalPages = page.getTotalPages();
```

```
List<Book> bookList = page.getContent();
```

# What we learned

## Sorting and Pagination

```
public Page<Book> listAll(int pageNumber, String keyword, String sortField, String sortDir) {  
    Sort sort = Sort.by(sortField);  
    sort = sortDir.equals("asc") ? sort.ascending() : sort.descending();
```

```
model.addAttribute(attributeName: "sortField", sortField);  
model.addAttribute(attributeName: "sortDir", sortDir);
```

# Future Work

- Late fees tracking & payment
- Dynamic queries
- File compression
- Email reminders for due date
- Password recovery
- More front-end development

# Summary

---

- Accomplished many of the goals in our proposal
- Successfully combined different technologies
- Created a functional library system
